

SGHU 2552

Introduction to Geographic Information System

Chapter One

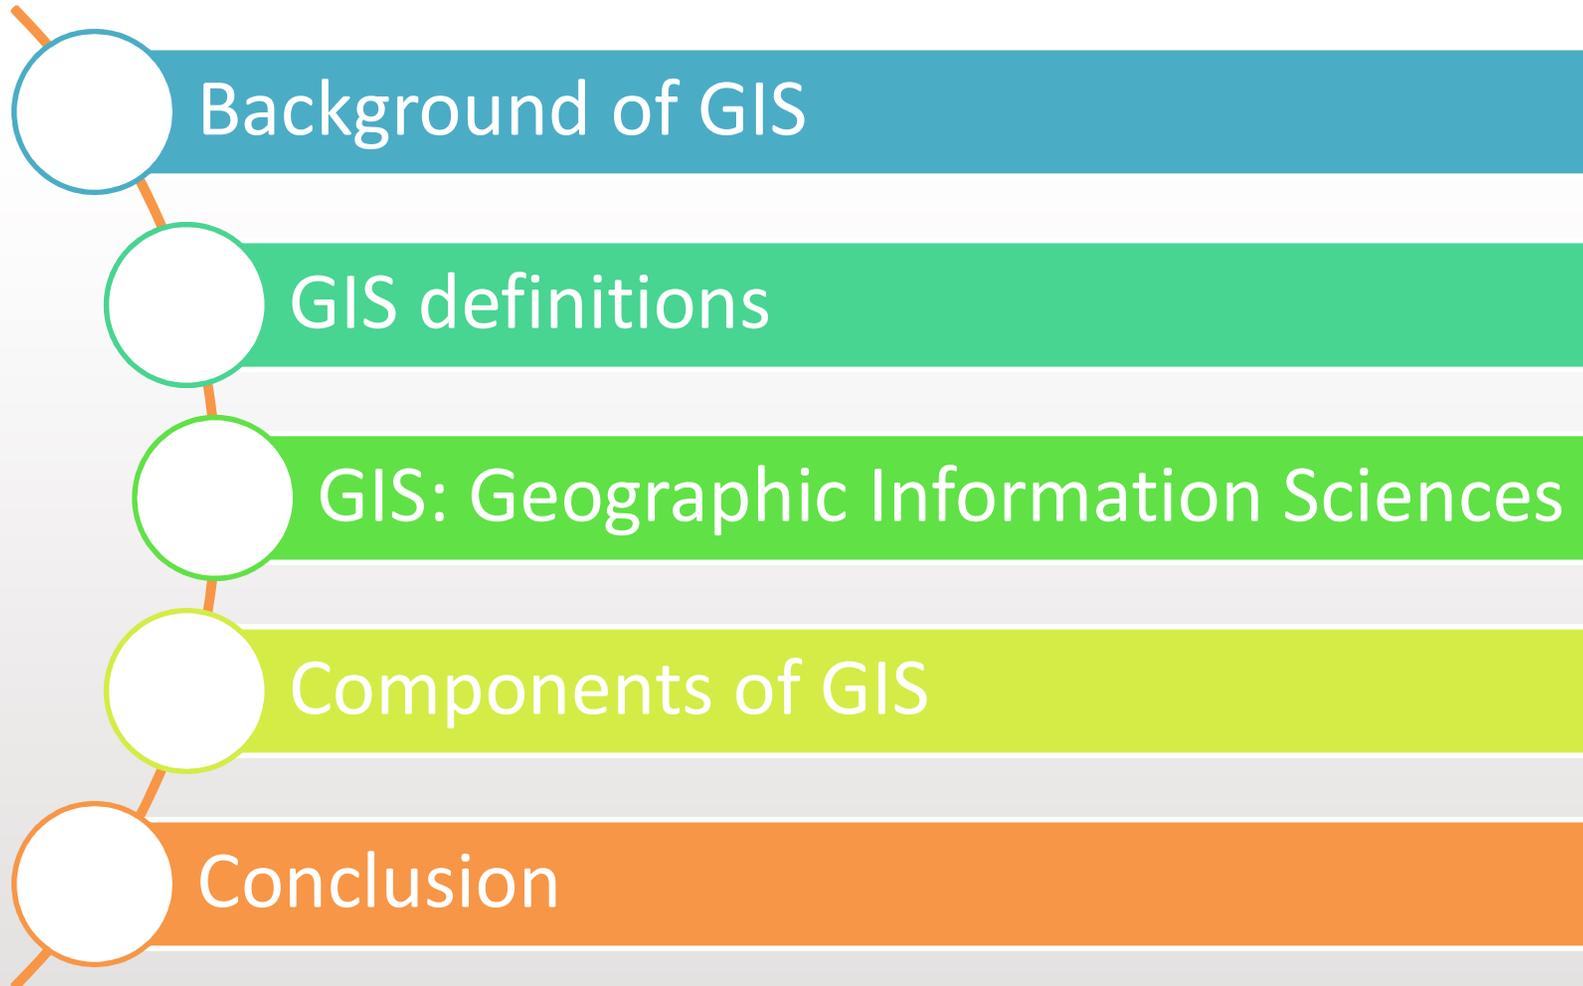

Dr Mohammad Zakri Tarmidi

Department of Geoinformation

Faculty of Geoinformation and Real Estate

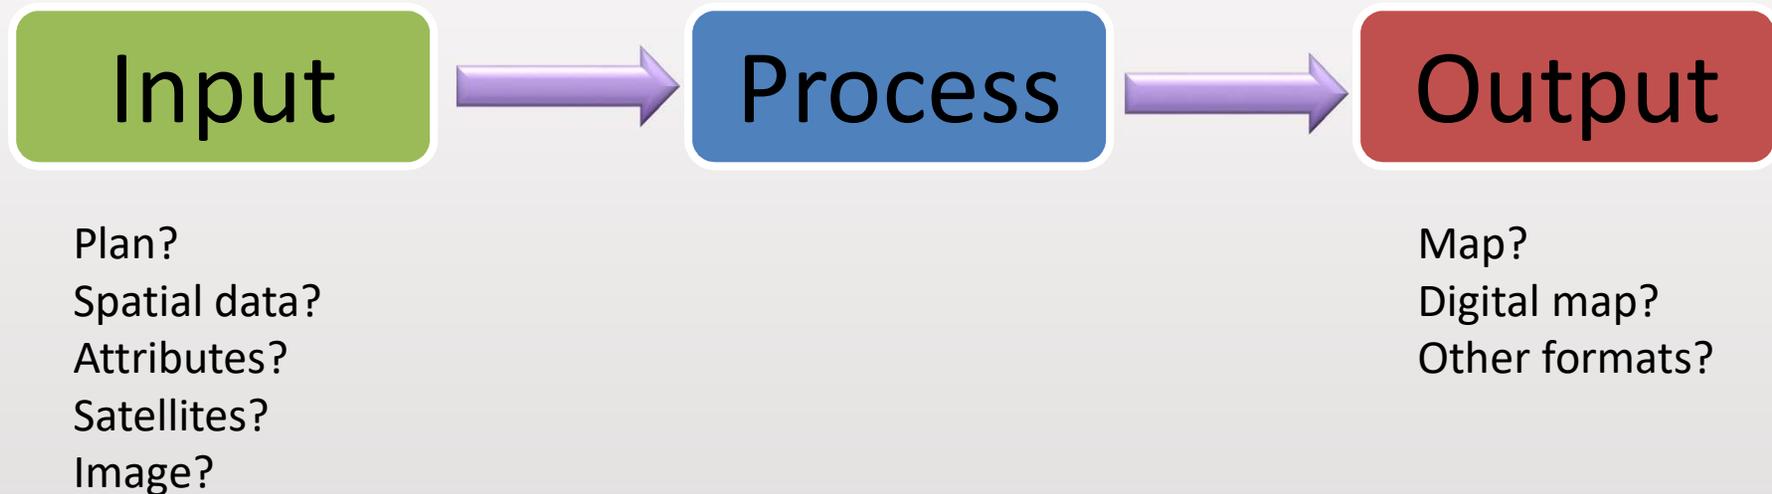

Content

Background to GIS

- What GIS can do?
- How it works?
- Questions on GIS?

HAVE YOU HEARD ABOUT GIS?

Today's requirement?

Something to ponder

What do people search everyday?

- Place to eat?
- Place to visit?
- Where's the hospital?
- Our friends houses
- Wedding place

Its about location; how to know? Viewing?

Asking about locations?

Query (we ask)

Simple Query

Where's the restaurant?

Which shopping complex?

Complex Query

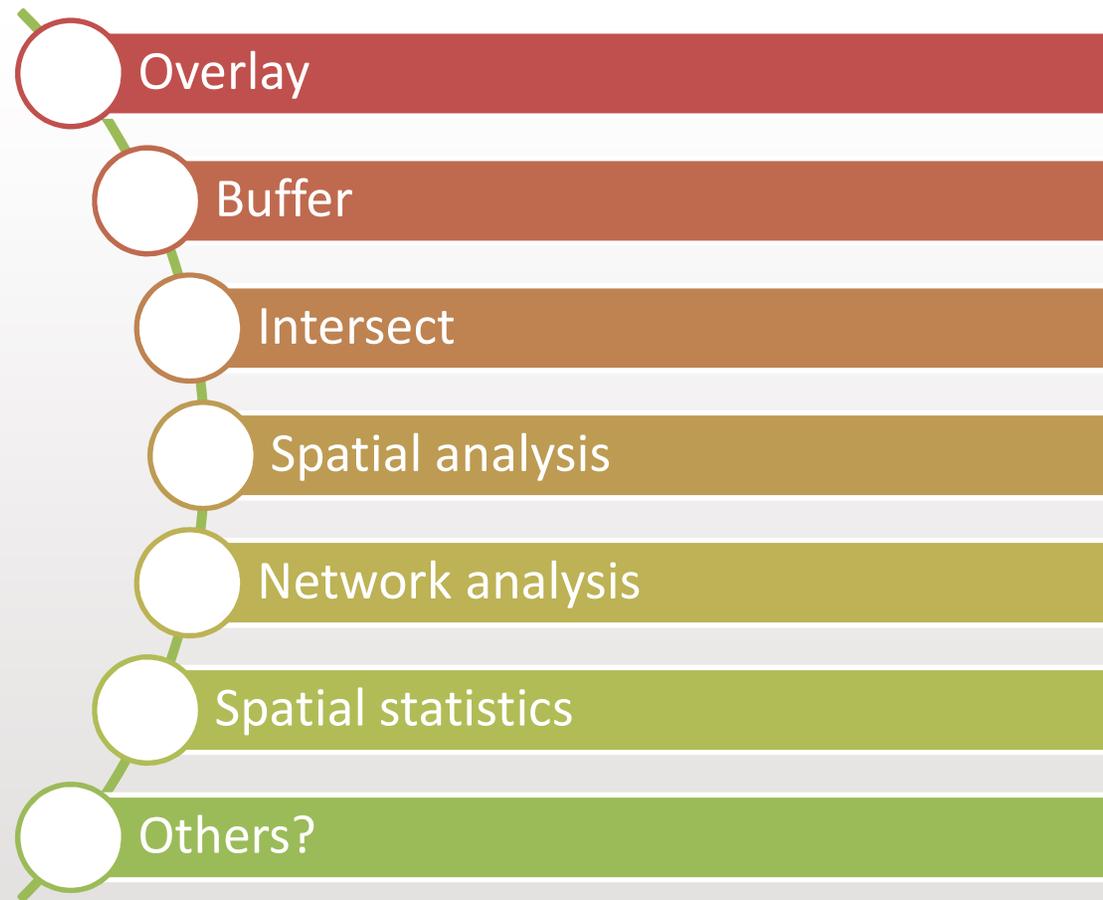

Where's the place will be affected when is flood?

Where's the highest population density in Johor Bahru's area?

How to answer the complex query?

- Via having spatial analysis such as;

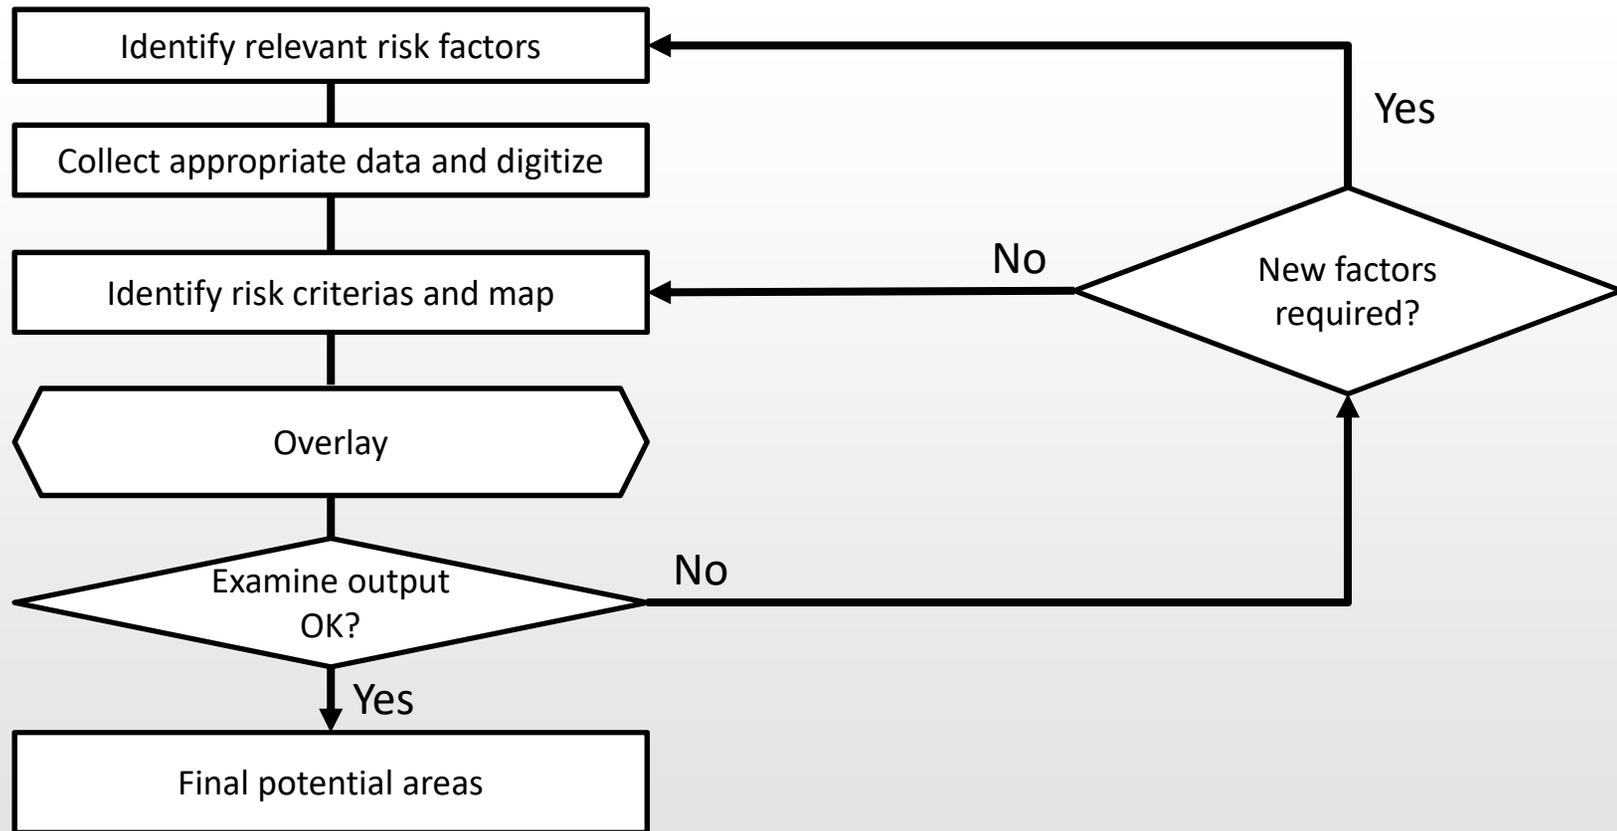

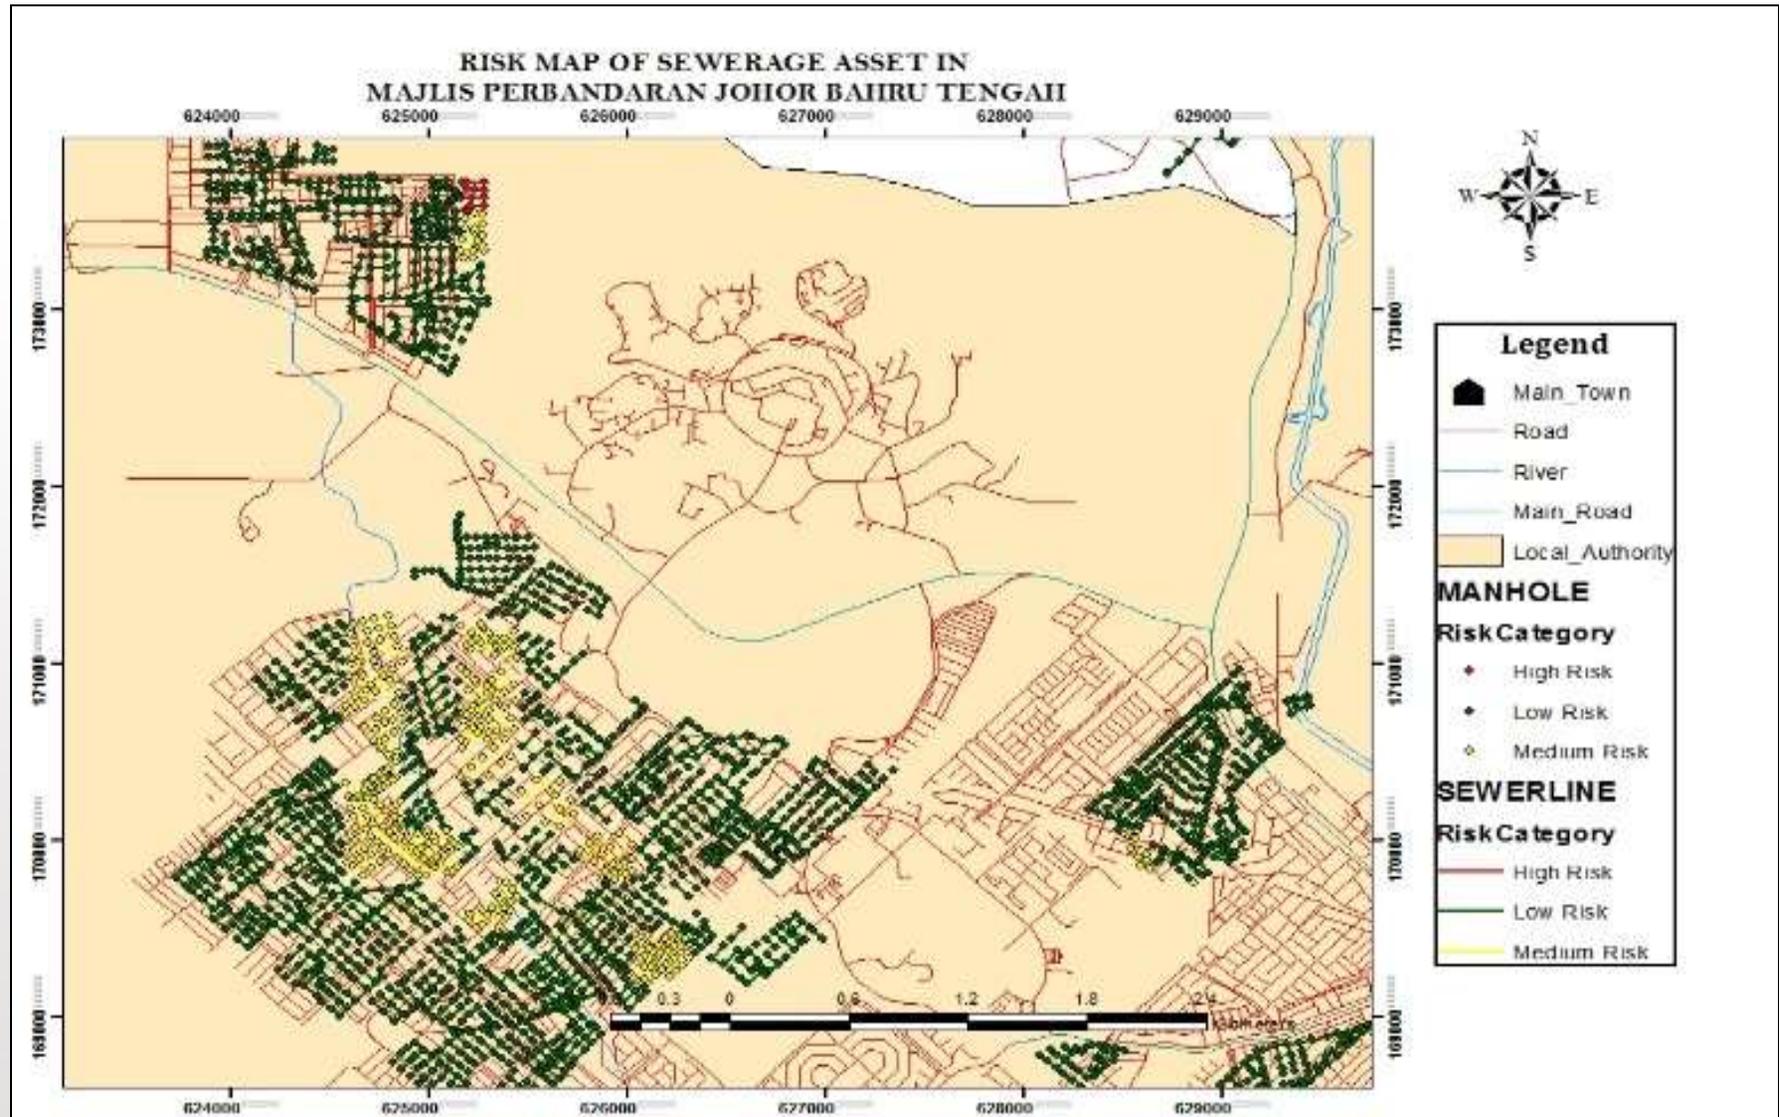

CASE STUDIES

Searching for sites

- Example of searching for utilities that have risk

GIS DEFINITIONS

GIS COMPONENTS

GIS definitions

- Some of the definitions;
 - Terry and Rhind, 1989; “**GIS is a computer system that can hold and use data describing places on Earth’s surfaces**”

(cont.) GIS definitions

- Burrough, 1986; “a **set of tools** of **collecting, storing, retrieving** at will, transforming and displaying **spatial data** from the **real world** for a particular set of purpose”

GIS Definition (cont...)

- In general, GIS cover;
 - **Computer system**; hardware, software, appropriate procedures
 - **Spatially referenced** or **geographical data**
 - **Management** and **analysis tasks**

GIS should be able;

Quick and easy access to large volumes of data

Easy and fast

Have capabilities of;

Select detail by area or theme

Link or merge data with other set of data

Analyse spatial characteristic of data

Update data quickly and cheaply

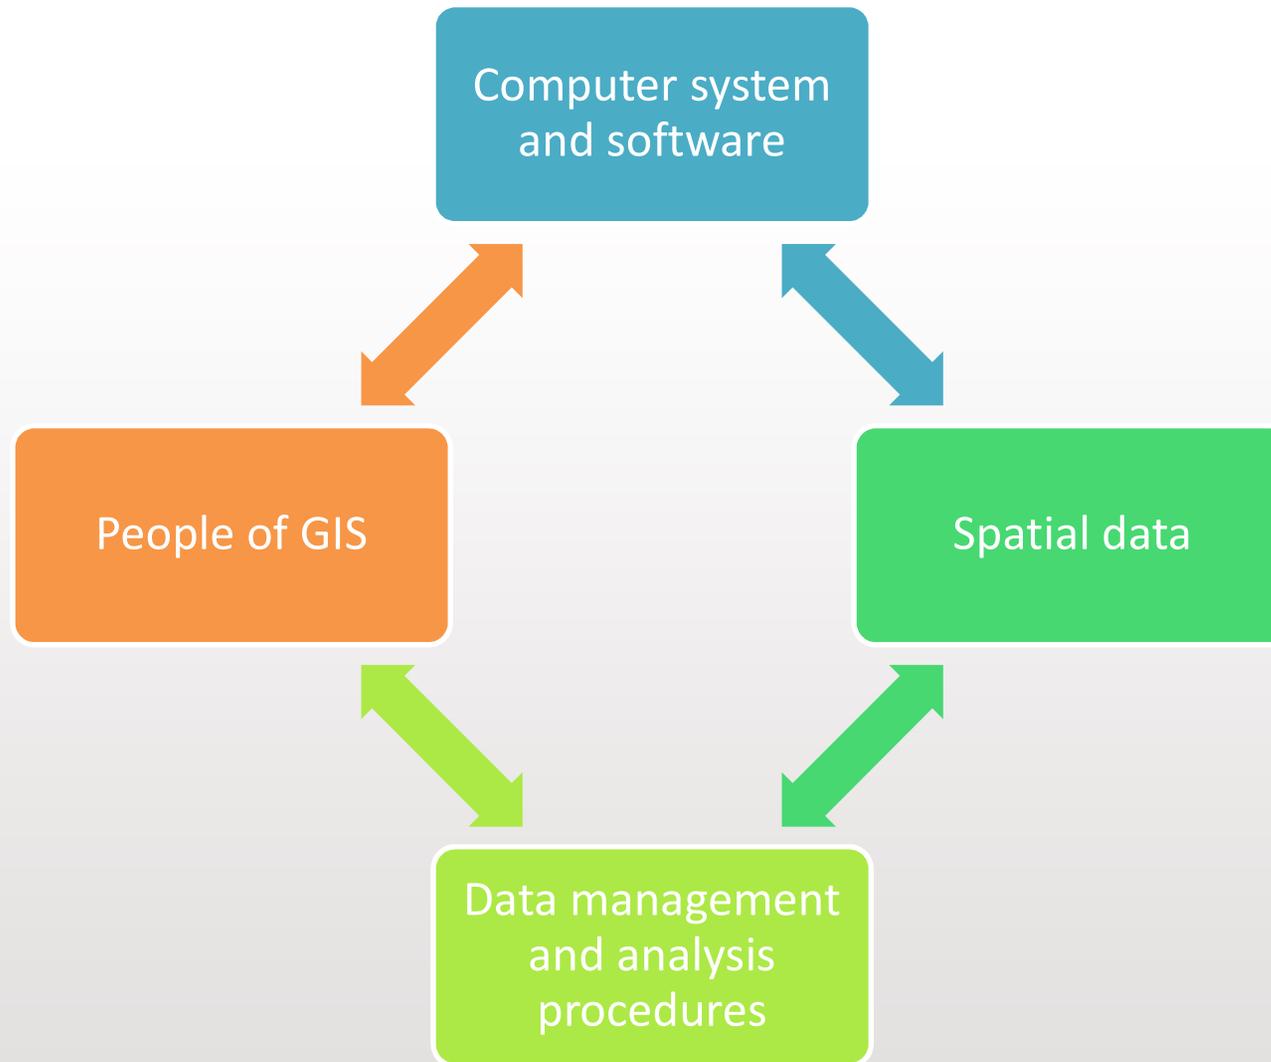

Model data and access alternatives

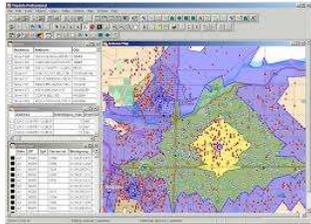

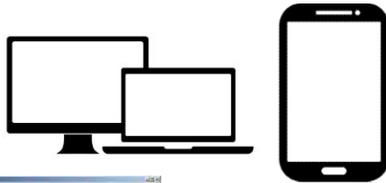

Output capabilities;

Maps, graphs, lists, summary statistics

Components of GIS

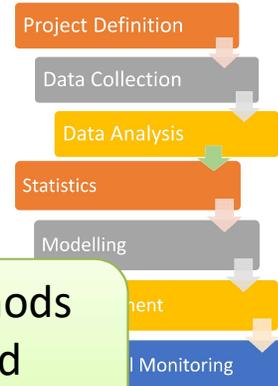

Hardware and Software

Methods and Procedures

GIS components

Spatial data

People

Layers

Communication networks

Land and water transactions

Land use

Farm holdings

Ownership

Soil properties

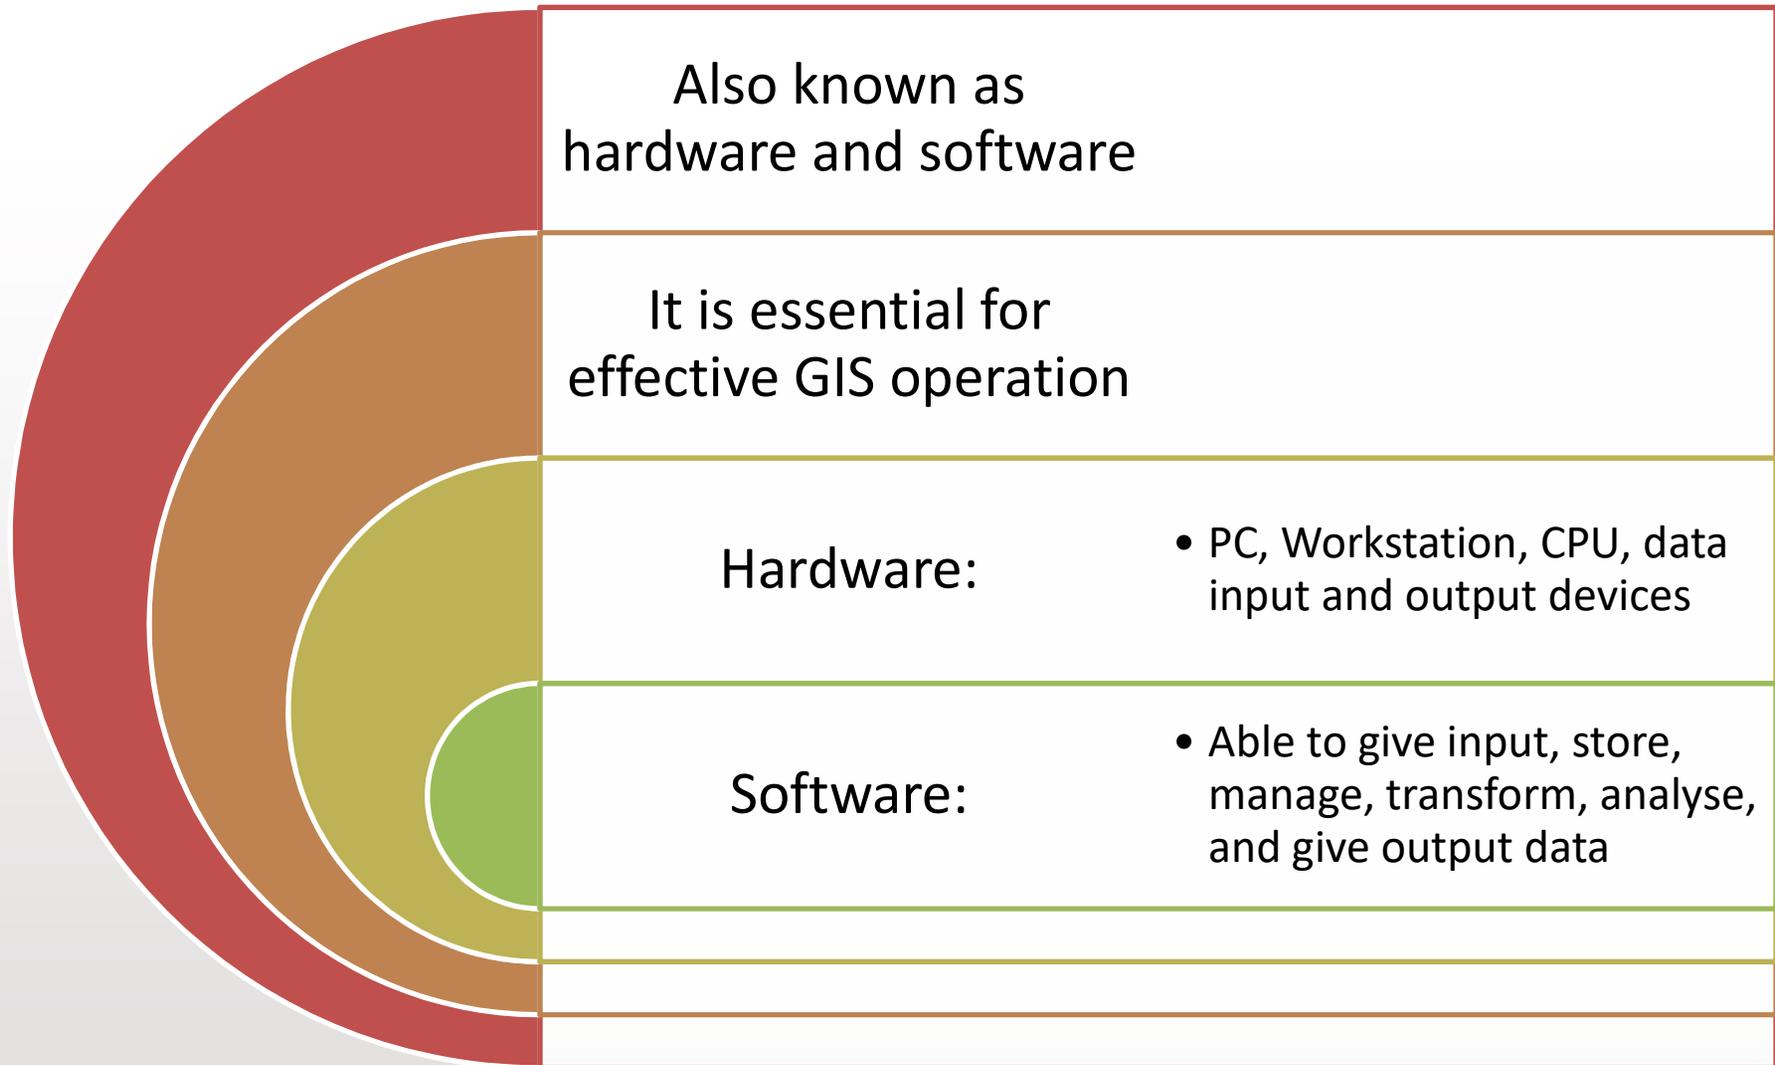

Water flow

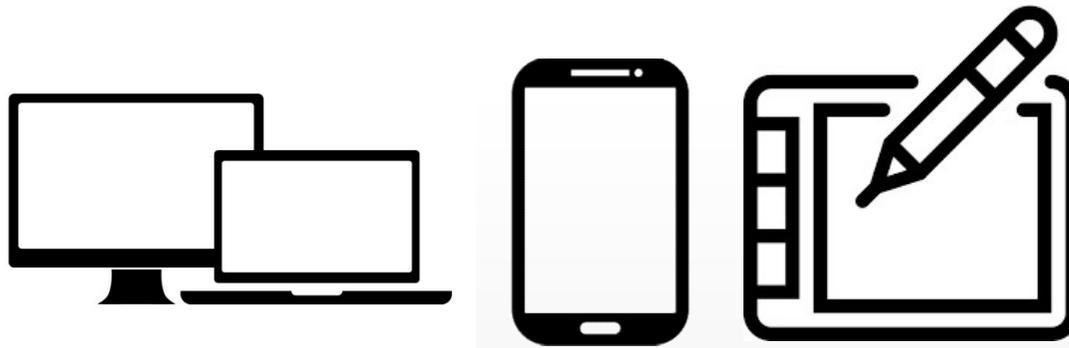

1. Computer system and software

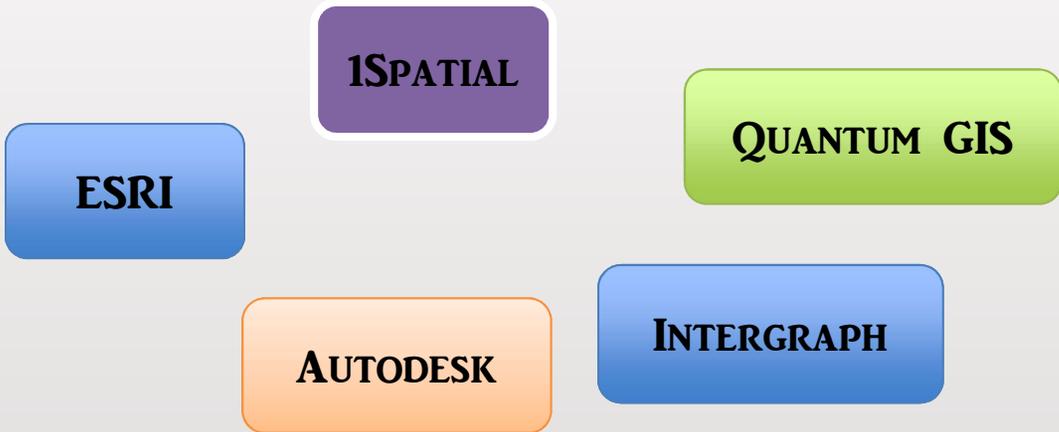

Computer system and software (cont...)

- Able to handle data input (GPS, drawing, etc..)
- Able to process spatial data
- Able to view output

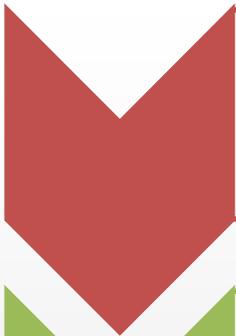

- Input
- Analyse
- Transform
- View in real time
- Internet access

2. Spatial data

- Spatial data have information about;

- Positions

- Connections with other features (topology)

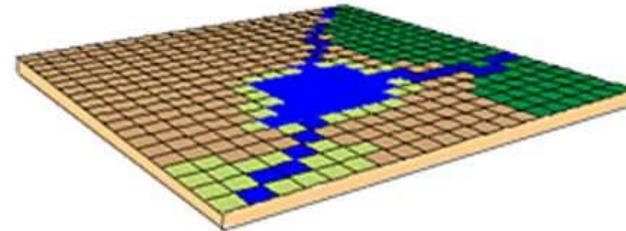

- Details of non-spatial characteristics

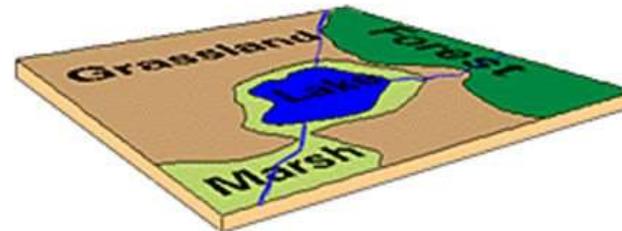

How to “digitally” show the real world?

DIGITAL SPATIAL DATA

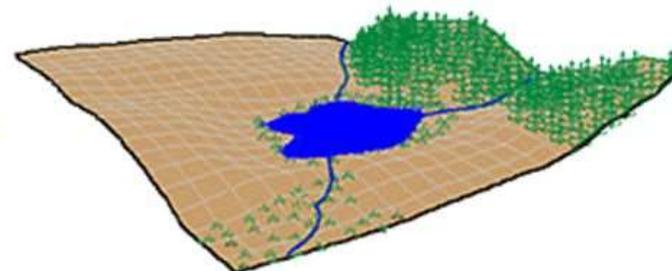

• RASTER →

• VECTOR →

• Real World →

Source: Defense Mapping School
National Imagery and Mapping Agency

Spatial data (cont...)

Spatial referencing;
flexible and lasting
reference system

Data model

Need simplification
(generalization) based on
scale and other factors

Spatial data (cont...)

3 basic
spatial data
types;

- Point
- Line
- Polygon/Areas

Data model

- Raster (grid or tesseral)
- Vector
- Others; Laser scanning, 3D, etc..

Spatial data model and data types

Feature Type

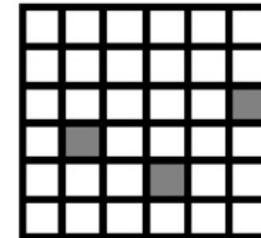

Vector Model

Raster Model

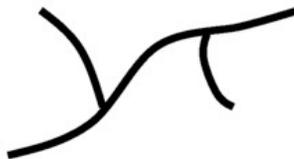

Point Feature

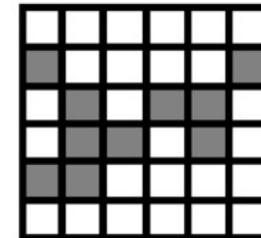

Building

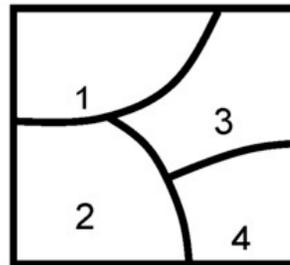

Line Feature

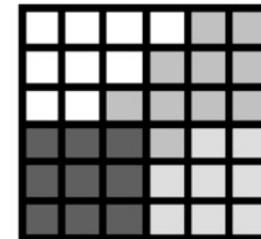

Road

Area Feature

Land-use

Source: Heywood et al, 2002

3. Data management and analysis procedures

Management of spatial data for;

- Spatial data input, storage, management, transformation, analysis and output

To facilitate storage, organization and retrieval of data using database management system (DBMS)

- DBMS: set of software to manage spatial and non-spatial data
- DBMS support multiple users and database

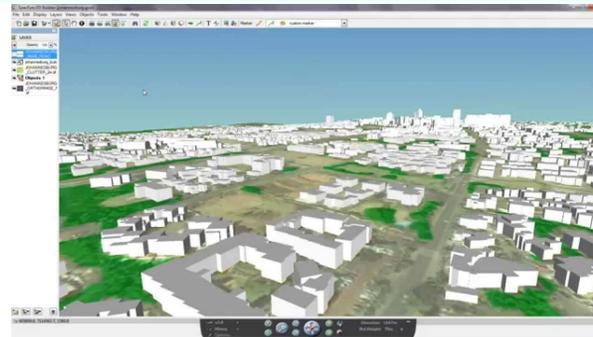

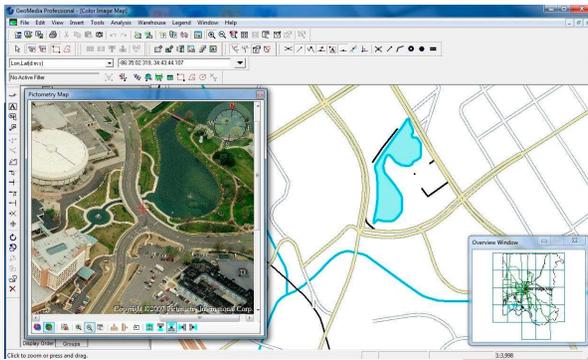

Data management and analysis procedures (cont...)

Transformation: changing of map projection from sources

Able to handle layers of spatial data

Able to visualize the spatial data; incorporate with cartographic design

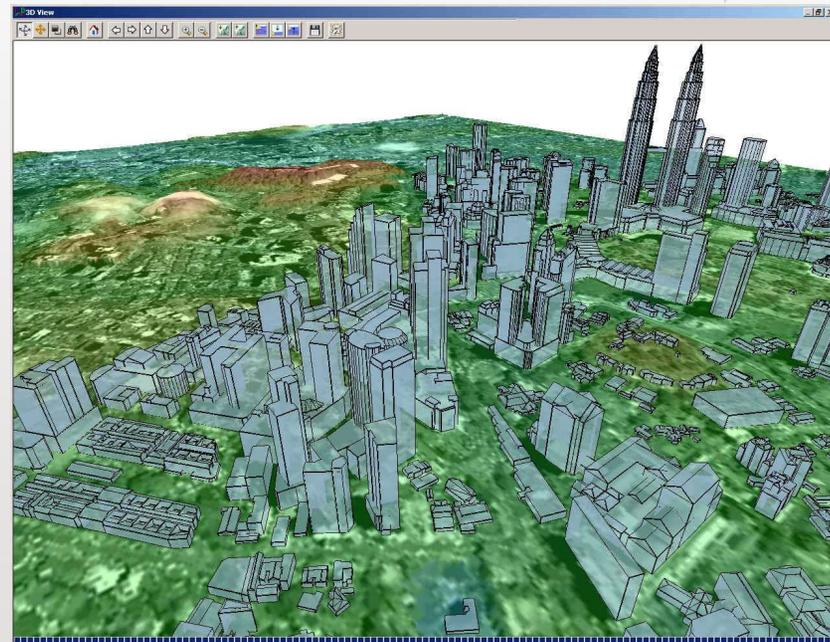

Spatial data input

Spatial management

Visualization

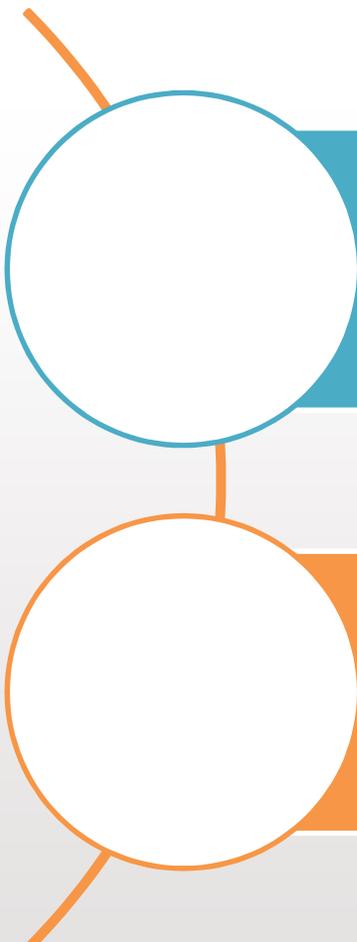

Analysis

Produces output

4. People and GIS

People to plan, implement, and operate

Involved

- Small to International community

GIS People interaction

Small applications

International community

Conclusion

GIS been widely used and have been established, but people didn't have knowledge about it.

GIS is combination of Science, Art and Technology

GIS and the future?
